Originally, electricity and magnetism were considered to be two separate forces. This view changed, however, with the publication of James Clerk Maxwell's 1873 *A Treatise on Electricity and Magnetism* in which the interactions of positive and negative charges were shown to be mediated by one force. There are four main effects resulting from these interactions, all of which have been clearly ...

Magnetism is a class of physical phenomena that are mediated by magnetic fields. Electric currents and the magnetic moments of elementary particles give rise to a magnetic field, which acts on other currents and magnetic moments. The most familiar effects occur in ferromagnetic materials, which are strongly attracted by magnetic fields and can be magnetized to become permanent magnets ...

MKS is the system of units based on measuring lengths in meters, mass in kilograms, and time in seconds. MKS is generally used in engineering and beginning physics, where the so-called cgs system (based on the centimeter, gram, and second) is commonly used in theoretic physics. The most familiar units of electricity and magnetism (ohm, farad, coulomb, etc.) are MKS units.

When we think about objects that respond to magnets, fruit usually doesn't come to mind. Watch a rare-earth magnet repel a grape and discover different kinds of magnetism.

James Clerk Maxwell'in, içinde pozitif ve negatif yüklerin etkileşimlerinin tek kuvvetle düzenlendiği gösterilen *Treatise on Electricity and Magnetism* yayınıyla değişti. Deneyler ile açıkça gösterilmiş olan tüm bu etkileşimlerin dört ana etkisi vardır:

Në fizikë, një fushë magnetike është një fushë vektoriale që përshkon gjithë hapësirën dhe e cila shkakton një forcë magnetike mbi një ngarkesë elektrike lëvizëse ose mbi një dipol magnetik (siç janë magnetet e përhershëm). Kur vendoset në një fushë magnetike, dipoli magnetik tenton që të drejtohet sipas një boshti që është paralel me fushën magnetike, sic ...
