In human anatomy, the axillary vein is a large blood vessel that conveys blood from the lateral aspect of the thorax, axilla (armpit) and upper limb toward the heart. There is one axillary vein on each side of the body. Its origin is at the lower margin of the teres major muscle and a continuation of the brachial vein.. This large vein is formed by the brachial vein and the basilic vein.

The lymphatic system plays a vital role as one of the organ systems of the body. This system functions with the digestive system to absorb dietary lipids , which enter lymphatic vessels rather than blood vessels for transport. It also acts with the cardiovascular system to control the body's fluid balance.

Recently, a number of creationist individuals and organizations have created websites touting the woodpecker as an example of an organism which "could not have evolved." In making their case, they have presented a great deal of information which is either distorted or patently false concerning the ...

A femoral bone contusion is a deep bruise, or hematoma, of the thighbone. Contusions of the femur can occur from extreme blunt trauma to the thigh or from the femur jamming the tibia at the knee joint, which might happen if you landed awkwardly from a jump. Bone contusions cause deep, aching pain and ...

Funktion. Foruden at løfte skulderen kan trapezmusklen dreje skulderbladet, så dets laterale (væk fra midten) hjørne med ledfladen svinger opad og fremad. Indirekte er muskelen med til at bevæge og styre halshvirvelsøjlen og hovedet. Ved lammelse af muskelen synker skulderbladet nedad og fremad, og udadrotationen svækkes.

Struttura. La costa è un osso non piatto ma nastriforme; ogni essere umano ne possiede dodici paia, per un totale di 24. La costa si estende solitamente dallo sterno fino ad arrivare, curvandosi posteriormente, a due principali punti di intersezione con le vertebre della colonna vertebrale. Anteriormente la costa può connettersi con lo sterno, grazie ad apposite superfici articolari.
