A genome sequence is the complete list of the nucleotides (A, C, G, and T for DNA genomes) that make up all the chromosomes of an individual or a species. Within a species, the vast majority of nucleotides are identical between individuals, but sequencing multiple individuals is necessary to understand the genetic diversity.

Many people have the illusion that if their testing company says a person is a 3rd to 5th cousin they really will be. That is not the case. The testing companies are just making the best guess they can from the data they have. They do not seem to take segment sizes into account, rather they primarily use total shared DNA measured in centimorgans (cMs) for their relatedness estimates, usually ...

The newest form of prenatal testing for Down syndrome is regularly referred to as testing cell free fetal DNA. At the recent American College of Medical Genetics (ACMG) annual meeting it was made clear that, in fact, what is mostly being tested is placental DNA. Perhaps using precise language would make clear that NIPT remains a highly accurate screening test, not a diagnostic test, since it ...
