structures. Concrete dams are of great importance because any damage can cause irreparable financial and casualties. Dynamic analysis of the concrete weight dams against external and internal forces has been the center of attention for Scientists and experts. Present study is focused on dynamic analysis of concrete

Dynamic Analysis of Hirakud Dam Due to Seismic Forces

Static and dynamic simulations of concrete gravity dams should cope with the variation of foundation mass, foundation stiffness, ground motion excitation and geometry of both dam and reservoir.

In the present study the nonlinear dynamic analysis of concrete arch dam using rotating smeared crack model is presented. The proposed smeared crack model is capable of modeling of mass concrete damage in three-dimensional space. It simulates the tensile fracture on the mass concrete and contains pre-softening behavior, softening initiation,

Nonlinear Dynamic Analysis of Concrete Arch Dams

A new modal technique is proposed for dynamic analysis of concrete arch dam-reservoir systems in frequency domain. The approach relies on the new mode shapes that are entitled "ideal-coupled modes". These modes are employed in somehow similar to decoupled modes of the dam-reservoir system.

Dynamic analysis of concrete arch dams by ideal-coupled ...

An analysis procedure in the frequency domain is developed for determining the earthquake response of two-dimensional concrete gravity and embankment dams including hydrodynamic effects; responses of the elastic dams and compressible water are assumed linear.

Application of pseudo-symmetric technique in dynamic analysis of concrete gravity dams V. Lotfi Department of Civil and Environmental Engineering, Amirkabir University, Iran Abstract A new approach is presented for seismic analysis of concrete gravity dams in the time domain. The technique is based on symmetric formulation of dam-reservoir

Analysis and Design of Concrete Dams - Sharif

Dynamic analysis of concrete gravity dam-reservoir systems can be carried out rigorously by FE-(FE-HE) method in the frequency domain. This means that the dam is discretized by plane solid finite elements, while, the reservoir is divided into two parts: a near-field region (usually an irregular shape) in the vicinity of

Dynamic Analysis of Concrete Dam Due to Seismic Forces

In particular, when a concrete dam is founded on soft soil, the dynamic interaction between the dam the reservoir and the soil becomes much more complex, and cannot be realistically simulated by ...
