the effort required to solve (A) and (B) naturally comes from the fact that (A) is a non-convex optimization problem, while (B) is convex. Note that realizing what is easy and what is difficult in Optimization is, aside from theoretical importance, extremely important methodologically. Indeed, mathematical models of real world

Chapter 8 Convex Optimization 8.1 Definition A convex optimization problem (or just a convex problem) is a problem consisting of minimizing a convex function over a convex set. More explicitly, a convex problem is of the form  $\min f(x)$  s.t.  $x \in C$ , (8.1)

### Chapter 8 Convex Optimization

Show that this is a convex optimization problem. Solution. Actually, there's not much to do in this problem. The constraints,  $x \geq 0$ ,  $1^T x = 1$ , are clearly convex, so we just need to show that the objective is concave (since it is to be maximized). We can do that in just a few steps: First, note that  $\log$  is concave, so  $\log(p^T$
