The only difference between monohybrid and dihybrid crosses is the number of traits being looked into. A monohybrid cross is when the offspring of homozygous parents that only differ on a single trait are bred to come up with the second generation.

**Monohybrid and Dihybrid cross? | Yahoo Answers**

Dihybrid Cross Definition. A dihybrid cross is an experiment in genetics in which the phenotypes of two genes are followed through the mating of individuals carrying multiple alleles at those gene loci. Most sexually reproducing organisms carry two copies of each gene, allowing them to carry two different alleles.
