There are multiple ways to combine or join two arrays in Java, both for primitive like int array and Object e.g. String array. You can even write your own combine() method which can use System.arraycopy() to copy both those array into the third array. But being a Java developer, I first looked in JDK to find any method which concatenates two arrays in Java.

Times and durations. Time perception and time management inside the two models are quite different. Project time is definite — a long or short period — but with time constraints; each project has a definite beginning and a definite ending, its best geometric and suggestive representation is a segment. Durations are proportional to the length of the segments that represent activities.
