Data science is a multi-disciplinary field that uses scientific methods, processes, algorithms and systems to extract knowledge and insights from structured and unstructured data. Data science is the same concept as data mining and big data: "use the most powerful hardware, the most powerful programming systems, and the most efficient algorithms to solve problems".

2.2 Sentiment analysis with inner join. With data in a tidy format, sentiment analysis can be done as an inner join. This is another of the great successes of viewing text mining as a tidy data analysis task; much as removing stop words is an antijoin operation, performing sentiment analysis is an inner join operation.

Folks, I beg to argue the following: inductive analytics is a better denomination than predictive, for the seemingly obvious reason that algorithms induce values from known data. That is what statistics and DM algorithms do. embedded analytics is a better denomination than prescriptive. A specific analytics can be either descriptive or inductive, and the relevant fact here is that any of those ...

Big Data Analytics: Descriptive Vs. Predictive Vs. Prescriptive

Data analysis is a process of inspecting, cleansing, transforming, and modeling data with the goal of discovering useful information, informing conclusions, and supporting decision-making. Data analysis has multiple facets and approaches, encompassing diverse techniques under a variety of names, and is used in different business, science, and social science domains.
