There are numerous different types of databases which a project manager may encounter. To find out what the top 12 database types are please go to My-Project-Management-Expert.com

Different Types of Databases - My-Project-Management-Expert

A column-oriented DBMS (or columnar database management system) is a database management system (DBMS) that stores data tables by column rather than by row. Practical use of a column store versus a row store differs little in the relational DBMS world. Both columnar and row databases can use traditional database query languages like SQL to load data and perform queries.
