The Biopsychosocial Model is an interdisciplinary model that looks at the interconnection between biology, psychology, & socio-environmental factors. The model specifically examines how these aspects play a role in topics ranging from health & disease models to human development. This model was developed by George Engel in 1977 and is the first of its kind to employ this type of multifaceted ...

In chemistry, an ideal solution or ideal mixture is a solution with thermodynamic properties analogous to those of a mixture of ideal gases. The enthalpy of mixing is zero as is the volume change on mixing by definition; the closer to zero the enthalpy of mixing is, the more "ideal" the behaviour of the solution becomes. The vapor pressure of the solution obeys Raoult's law, and the activity ...

Chitin, poly (β -(1 \rightarrow 4)-N-acetyl-d-glucosamine), is a natural polysaccharide of major importance, first identified in 1884 (). This biopolymer is synthesized by an enormous number of living organisms; and considering the amount of chitin produced annually in the world, it is the most abundant polymer after cellulose.

1.. Introduction A commonly used definition of biocompatibility is "the ability of a material to perform with an appropriate host response in a specific application". However, since the interaction between materials and biological systems occurs in a wide range of applications and molecular processes, there is no precise definition for a biocompatible material or accurate measurement of ...
