SAS-based software program to analyze data according to the method proposed by Hayman (1954b). In this paper, we (i) describe a SAS program SASHAYDIALL developed for analysis of diallel cross data according to Hayman's (1954b) methodology, and (ii) demonstrate the use of SASHAYDIALL with two diallel cross data sets.

I think it's unlikely that you'll find worked examples in R for the analysis of diallels. I did find some references for diallel analysis in SAS (e.g., here, and there's a chapter on DIALLEL-SAS in the book Handbook of formulas and software for plant geneticists and breeders).

A complete diallel cross study of three local populations (Ahmet, Dallı and Iri) and one cultivar (Çakmak-79) of durum wheat (*Triticum durum* Desf.) was carried out with parents and F 1 progeny, to determine heterotic patterns, correlations, heritability and combining ability of various kernel physical features. The relative importance of additive vs. non-additive genetic effects was also ...

The experiments were carried out in two research stations (MARDI Bukit Tangga, Kedah, and MARDI Seberang Perai, Penang) in Malaysia. The crossings were performed using the four inbred lines in complete diallel cross including selfs and reciprocals. We evaluated the yield components and fruit characters such as fruit yield per plant, vine length, days to fruit maturity, fruit weight, total ...

The diallel cross was first used in animal breeding by Schmidt in 1919 when crosses were made between two males and two females at different times (Lush, 1945). The term diallel cross as applied to plants, however, did not appear in the literature until 1953 (Jinks and Hayman, 1953). The theory and statistical analysis of the diallel mating
