Collision Theory - Impact for a Chemical Reaction. Why? The collision theory states that a chemical reaction can only occur between particles when they collide (hit each other). The collision between reactant particles is necessary but not sufficient for a reaction to take place. The collisions also have to be effective.

The higher the concentration of reactant molecules, the more frequently they will collide with each other. The more often the reactant molecules collide, the faster the rate of reaction. As the reaction proceeds, the concentration of reactant decreases, and consequently the rate will decrease.
