Complex Number. The complex numbers are the field of numbers of the form $a + bi$, where a and b are real numbers and i is the imaginary unit equal to the square root of -1 . When a single letter is used to denote a complex number, it is sometimes called an "affix." In component notation, $a + bi$ can be written (a, b) . The field of complex numbers includes the field of real numbers as a subfield.

But just imagine such numbers exist, because we will need them. So, a Complex Number has a real part and an imaginary part. But either part can be 0, so all Real Numbers and Imaginary Numbers are also Complex Numbers. Complex does not mean complicated. It means the two types of numbers, real and ...

The imaginary unit or unit imaginary number (i) is a solution to the quadratic equation $x^2 + 1 = 0$. Although there is no real number with this property, i can be used to extend the real numbers to what are called complex numbers, using addition and multiplication. A simple example of the use of i in a complex number is $2 + 3i$. Imaginary numbers are an important mathematical concept, which ...

The abstract concept of negative numbers was recognized as early as 100–50 BC in China. The Nine Chapters on the Mathematical Art contains methods for finding the areas of figures; red rods were used to denote positive coefficients, black for negative. The first reference in a Western work was in the 3rd century AD in Greece. Diophantus referred to the equation equivalent to $4x + 20 = 0$ (the ...

for any imaginary number, such as $i^2 = -1$, violates the rule that the product of two numbers of a like sign is positive. The general rules for working with complex numbers are as follows: 1. Equality: To be equal, two complex numbers must have equal real parts and equal imaginary parts.

In this chapter we will start looking at second order differential equations. We will concentrate mostly on constant coefficient second order differential equations. We will derive the solutions for homogeneous differential equations and we will use the methods of undetermined coefficients and variation of parameters to solve non homogeneous differential equations.
