Key facts. Ebola virus disease (EVD), formerly known as Ebola haemorrhagic fever, is a severe, often fatal illness in humans. The virus is transmitted to people from wild animals and spreads in the human population through human-to-human transmission.

### **Ebola virus disease - who.int**

Ebola virus disease (EVD), also known as Ebola hemorrhagic fever (EHF) or simply Ebola, is a viral hemorrhagic fever of humans and other primates caused by ebolaviruses. Signs and symptoms typically start between two days and three weeks after contracting the virus with a fever, sore throat, muscular pain, and headaches. Vomiting, diarrhea and rash usually follow, along with decreased function ...

### **Ebola virus disease - Wikipedia**

Ebola Virus Disease (EVD) is a rare and deadly disease in people and nonhuman primates. The viruses that cause EVD are located mainly in sub-Saharan Africa. People can get EVD through direct contact with an infected animal (bat or nonhuman primate) or a sick or dead person infected with Ebola virus.

### **Ebola (Ebola Virus Disease) | CDC**

Zaire ebolavirus, more commonly known as simply Ebola virus (EBOV), is one of six known species within the genus Ebolavirus. Four of the six known ebolaviruses, including EBOV, cause a severe and often fatal hemorrhagic fever in humans and other mammals, known as Ebola virus disease (EVD). Ebola virus has caused the majority of human deaths from EVD, and is the cause of the 2013–2015 Ebola ...

### **Zaire ebolavirus - Wikipedia**

The Ebola virus causes an acute, serious illness which is often fatal if untreated. Ebola virus disease (EVD) first appeared in 1976 in 2 simultaneous outbreaks, one in what is now, Nzara, South Sudan, and the other in Yambuku, Democratic Republic of Congo.

### **Ebola Virus Disease | WHO | Regional Office for Africa**

The Ebola virus can be found across the animal kingdom, from bats and birds to pigs and porcupines. But there is a difference between having a disease and transmitting it to another animal—or ...

### **Ebola And Animals: What You Need To Know | Time**

This hands-on activity allows students to analyze DNA sequences of Ebola viruses. Students use these sequences to track the virus's spread during the 2013–2016 Ebola outbreak in West Africa. After watching a related video, students sort strips of paper showing sequences from Ebola viruses ...

### **Ebola: Disease Detectives | HHMI BioInteractive**

A "mysterious" disease began silently spreading in a small village in Guinea on 26 December 2013 but was not identified as Ebola until 21 March 2014. Chapter 2 - Retrospective studies conducted by WHO staff and Guinean health officials identified the index case in West Africa's Ebola epidemic as

...

### **WHO | Origins of the 2014 Ebola epidemic**

Ebola is a serious and deadly virus transmitted by animals and humans. It was initially detected in 1976 in Sudan and the Democratic Republic of Congo. Researchers named the disease after the ...
