It's a little old now, but with the release of a new 30" model from Dell we also wanted to take a look at the previous model. This was so that we could carry out a direct comparison with the new model, which we completed as part of our U3011 review. We also wanted to provide a full review of the 3008WFP separately as the price of the unit is sure to drop now that a new model is available, and ...

Problem. After updating my graphics driver to the latest version from NVIDIA (downloaded direct, not using Windows Update), my third monitor which is an Acer V226WL is not displaying the proper and native resolution. The native resolution is 1680 x 1050. I have a GeForce 660, and have had no problems until now with my monitors.

Every screen in your life is high resolution, your "retina" phone, your tablet, even your e-reader rocks pixels you can't see. Except your monitor.

Head to head the grain level of those two films are pretty much the same even though the pattern looks a bit different (Could also depend on how the scanner in use reacts on different film structure and emulsion) While scanning those two films for this test I felt that it was much easier to get

Screensiz.es is a handy database of screen sizes, viewport sizes, and pixel densities for popular smart phones, tablets, and monitors.
