The density, or more precisely, the volumetric mass density, of a substance is its mass per unit volume. The symbol most often used for density is  $\rho$  (the lower case Greek letter rho), although the Latin letter D can also be used. Mathematically, density is defined as mass divided by volume:  $\rho = \frac{m}{V}$  where  $\rho$  is the density,  $m$  is the mass, and  $V$  is the volume. In some cases (for instance, in the ...

A salt solution, also called a saline solution, is simply a mixture of salt and water. Salt is the solute (the dissolving substance), and water is the solvent (the substance that dissolves another to create a solution).

Seawater, or salt water, is water from a sea or ocean. On average, seawater in the world's oceans has a salinity of about 3.5% (35 g/L, 599 mM). This means that every kilogram (roughly one litre by volume) of seawater has approximately 35 grams (1.2 oz) of dissolved salts (predominantly sodium (Na<sup>+</sup>) and chloride (Cl<sup>-</sup>) ions). Average density at the surface is 1.025 kg/L. Seawater is denser ...

If the volume of stock solution and the volume of water are equal, you will be diluting the solution by half. This is called a two-fold dilution. If you want bigger steps, you should use relatively more water; if you want smaller steps, you should use relatively less water.
