DNA is a long polymer made from repeating units called nucleotides. The structure of DNA is dynamic along its length, being capable of coiling into tight loops and other shapes. In all species it is composed of two helical chains, bound to each other by hydrogen bonds. Both chains are coiled around the same axis, and have the same pitch of 34 angstroms (Å) (3.4 nanometres).

Molecular cloning is a set of experimental methods in molecular biology that are used to assemble recombinant DNA molecules and to direct their replication within host organisms. The use of the word cloning refers to the fact that the method involves the replication of one molecule to produce a population of cells with identical DNA molecules. Molecular cloning generally uses DNA sequences ...

Capturing leads is easy; qualifying and nurturing them until they turn into buyers is hard. Consider this: in the B2B software industry, the conversion rate from visitor to lead is 7%, but from visitor to close is a measly 0.68%. The lead qualification, nurturing and closing process depends on customer insight. Simply put, the more you know about your leads, the better you can serve them.
