In atomic physics, the spin quantum number is a quantum number that parameterizes the intrinsic angular momentum (or spin angular momentum, or simply spin) of a given particle. The spin quantum number is the fourth of a set of quantum numbers (the principal quantum number, the azimuthal quantum number, the magnetic quantum number, and the spin quantum number), which completely describe the ...

PPIII. The last part of the proton-proton chain, PPIII, is illustrated in table 3. The ${}^7\text{Be}$ has two ways to go - it can absorb an electron, as in PPII (99.89%), or it can absorb a proton, as in PPIII (0.11%). Absorbing a proton raises the nucleus from beryllium to boron, and the ${}^7\text{Be}$ becomes ${}^8\text{B}$. But ${}^8\text{B}$ is unstable and takes about 0.8 seconds, fairly independent of temperature, to spit out a ...

An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

The uncertainty principle, sometimes called the Heisenberg uncertainty principle, states that interaction and mechanical action come in quanta, that is, in discrete units. While one can detect an integral number of quanta, one cannot detect one half or two thirds of a quantum. The quantum of interaction joins the quanta of energy, time, and space in the current description of the world.

When you first do `npm install -g npm`, the shell (Bash) will search for npm in your path, find `/usr/bin/npm` installed by the system package, and then use it to install the new version of npm. The new version will be installed in `/usr/local/bin/npm`.. Now, your path should have `/usr/local/bin/` BEFORE `/usr/bin/`, so you would think it would now pick up the updated version in `/usr/local/bin/`, right?

In this part of the website we apply the ANOVA methodology of One-way ANOVA and Two-way ANOVA to the extension of the paired samples problem studied in Paired Sample t Test. In this analysis, known as ANOVA with Repeated Measures, the rows correspond to subjects or participants in the experiment and the columns represent various treatments (often based on time) for each subject.
