Product Reports. Skip to the Lab Analysis Summary. There are three distinctly different types of silver that are labeled and sold on the market as "colloidal silver"; they are ionic silver, silver protein, and true colloidal silver. Consumers seeking true colloidal silver are often at a disadvantage because each of these products represents themselves as colloidal silver.

The Truth About Ionic Silver. Many products claiming to be colloidal silver or angstrom size silver particle colloids are in fact mostly ionic silver solutions. Despite this, their labels and advertising never mention the words ionic silver or specify what percentage of the total silver in their product is made up of silver ions vs. silver particles. Many different terms are being using to ...

Because the size of the dispersed phase may be difficult to measure, and because colloids have the appearance of solutions, colloids are sometimes identified and characterized by their physico-chemical and transport properties. For example, if a colloid consists of a solid phase dispersed in a liquid, the solid particles will not diffuse through a membrane, whereas with a true solution the ...

A colloidal substance is any which has the quality of having another substance diffused evenly throughout it.. In the example of milk, there is a dispersal of liquid butterfat within a water-based solution. In this case, the liquid butterfat, the smaller molecule, is within the range of 1 nanometer and 1 micrometer, making it invisible to an optical microscope.

In chemistry, a solution is a special type of homogeneous mixture composed of two or more substances. In such a mixture, a solute is a substance dissolved in another substance, known as a solvent. The mixing process of a solution happens at a scale where the effects of chemical polarity are involved, resulting in interactions that are specific to solvation.

The phase separation behavior of polyoxyethylene sorbitan monolaurate (1.000 mmol/L) was investigated in aqueous micellar solution containing inorganic salt, especially the high concentration of different cationic chlorides including NaCl, KCl, MgCl<sub>2</sub>, CaCl<sub>2</sub>, BaCl<sub>2</sub> and AlCl<sub>3</sub>. The continuous decrease in the cloud point (CP) was observed on adding the univalent cationic chlorides (NaCl and KCl).
