Biology Starfish Dissection Worksheet Questions and Study ...

Starfish Dissection Introduction: Echinoderms are radially symmetrical animals that are only found in the sea (there are none on land or in fresh water). Echinoderms mean "spiny skin" in Greek. Many, but not all, echinoderms have spiny skin. There are over 6,000 species. Echinoderms usually have five appendages (arms or rays), but there are some

Starfish Dissection - Grygla Public School

STARFISH DISSECTION INTRODUCTION: The phylum Echinodermata includes starfishes or sea stars, brittle stars, sea urchins, sea lilies, and sea cucumbers. All but the last have a limy internal skeleton and hard external spines or plates. They are fixed or slow-moving inhabitants of the sea, from the high-tide zone to considerable depths.

Dougherty, Mr. | Science / BIOLOGY: Dissection - Starfish

The sea star, or starfish, is a marine invertebrate belonging to the phylum Echinodermata (from the Greek for spiny skin). It exhibits radial symmetry, with 5 arms extending from a central disk. Introduce your students to the external anatomy of the sea star using the dissection guide below and explore the interesting structures that function in protection, locomotion, and feeding.
