Relationship Between Structure and Strengths of Acids Brønsted-Lowry acids are H^+ donors . . .so. . acid strength is dependent on how readily donated the acidic H^+ is the weaker the interaction between A-H (in binary acids) or O-H (in oxoacids), the stronger the acid

Chapter 15: Acids and Bases Acids and Bases

The older Arrhenius theory of acids and bases viewed them as substances which produce hydrogen ions or hydroxide ions on dissociation. As useful a concept as this has been, it was unable to explain why NH_3 , which contains no OH^- ions, is a base and not an acid, why a solution of $FeCl_3$ is acidic, or why a solution of Na_2S is alkaline.. A more general theory of acids and bases was ...

A Lewis acid is a chemical species that contains an empty orbital which is capable of accepting an electron pair from a Lewis base to form a Lewis adduct. A Lewis base, then, is any species that has a filled orbital containing an electron pair which is not involved in bonding but may form a dative bond with a Lewis acid to form a Lewis adduct. For example, NH_3 is a Lewis base, because it can ...

An oxyanion, or oxoanion, is an ion with the generic formula AxO_z^{y-} (where A represents a chemical element and O represents an oxygen atom). Oxyanions are formed by a large majority of

the chemical elements. The formulae of simple oxyanions are determined by the octet rule. The corresponding oxyacid of an oxyanion is the compound $H_z A_x O_y$. The structures of condensed oxyanions can be ...

During the titration, we must stop right at the point where stoichiometric amounts of acid and base react. This is called the equivalence point or stoichiometric point. The problem with acids and bases is that nothing obvious happens at the equivalence point to tell you to stop the titration.

In face centered cubic, the packing in this lattice is more efficient than body centered cubic; if the atoms have radius r , then the length of the cube edges is square root of $8 \times r$; there are four atoms per unit cell in this type of packing; the packing efficiency in this lattice and hexagonal close packing are the same.
