Can we prove N_5 ? For sake of contradiction, assume N_5 is false. Consider the smallest element $n \in \mathbb{N}$ such that $2n \notin A$. If $n = 1$, then n is the successor of some natural number. Then $n + 1 \in A$ and so its successor $n + 2 \in A$, a contradiction. Is this a complete argument? from that which is flawed, and—if there is a flaw in an argument—explain what it is. Elementary students can construct arguments using concrete referents such as objects, drawings, diagrams, and actions. Such arguments can make sense and be correct, even though they are not generalized or made formal until later grades.

c) Nothing to do here. 12.10) If (s_n) is bounded, say $|s_n| < M$, then clearly $\limsup |s_n| \leq M$. Since $\limsup |s_n| < \infty$ (it can't be $-\infty$ because $|s_n| \geq 0$ for all n), let $\limsup |s_n| = s \in \mathbb{R}$. We must show (s_n) is bounded. Assume not. Then given $M > 0$, there exists n such that $|s_n| > M$. Take $M = s$ to get $|s_{n_1}| > s$. Next, take $M = |s_{n_1}|$ to get $|s_{n_2}| > |s_{n_1}| > s$. We make choose n
