Distributed computing is a field of computer science that studies distributed systems. A distributed system is a system whose components are located on different networked computers, which communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal. Three significant characteristics of distributed ...

The data layer, or layer 2, is the second layer of the seven-layer OSI model of computer networking. This layer is the protocol layer that transfers data between adjacent network nodes in a wide area network (WAN) or between nodes on the same local area network (LAN) segment. The data link layer provides the functional and procedural means to transfer data between network entities and might ...

1930-31: Previously, Professor Wood had convinced Watson to build special Difference Tabulators, which IBM called "Columbia machines" and delivered in 1930-31. These machines could process 150 cards per minute and were unique in their ability to rapidly accumulate sums of products or squares []. The Statistical Bureau soon became a service provider to outside organizations like the Rockefeller ...
