A rod of mass M and length L rests on a frictionless horizontal surface. A particle also of mass M moving with a velocity of V strikes the rod at a distance of $L/4$ from the center and comes to rest. Then by the conservation of linear momentum, the velocity of the center of mass of rod becomes V . And by the conservation of angular momentum ($M * V * L/4 = I * W$) we can determine W where W is ...
