Analysis (Transient Analysis). In the formulation of the Dam and Soil interaction, a substructure method is used. The coupling is done using the interfaces that take into account the interaction forces between the dam and Soil. Here ANSYS 14 is used for the analysis of the gravity dam section. 3.1 Data for the Gravity Dam

to previous work. By finite element Analysis 14.5, a three dimensional finite element model of Koyna gravity dam is proposed using Ansys 14.5. Dams with full reservoir and empty reservoir condition are analyzed. In this study, normal stress shear stress and deflection along X and Y direction is observed.
