Osmosis (/ ɒ z ' m ɒ s . s i s /) is the spontaneous net movement of solvent molecules through a selectively permeable membrane into a region of higher solute concentration, in the direction that tends to equalize the solute concentrations on the two sides. It may also be used to describe a physical process in which any solvent moves across a selectively permeable membrane (permeable to the ...

### Osmosis - Wikipedia

Often in informal, non-technical language, concentration is described in a qualitative way, through the use of adjectives such as "dilute" for solutions of relatively low concentration and "concentrated" for solutions of relatively high concentration. To concentrate a solution, one must add more solute (for example, alcohol), or reduce the amount of solvent (for example, water).

### Concentration - Wikipedia

di·lu·tion (dī-loo'shən, dī-) n. 1. a. The process of making weaker or less concentrated. b. A dilute or weakened condition. 2. A diluted substance. 3.
