In complex analysis, the real number r is not allowed to be negative and is the length of the radius vector for z ; that is, $r = |z|$. The real number θ represents the angle, measured in radians, that z makes with the positive real axis when z is interpreted as a radius vector (Fig.

Complex Variables and Applications, Seventh Edition

Equivalently (by Exercise 1.17), a root of unity is a complex number z such that $z^n = 1$ for some

positive integer n . In this case, we call z an n th root of unity. If n is the smallest positive integer with the property $z^n = 1$ then z is a primitive n th root of unity. Example 1.4.
