Chapter: Exercises: Last Updated: 1. Introduction : pdf: Mar 20, 2010 : Part 1: Relational Databases : 2. Relational Model : pdf: Mar 20, 2010 : 3. SQL : pdf: Mar 20 ...

Database System Concepts -- Solutions to Practice Exercises

A database is an organized collection of data, generally stored and accessed electronically from a computer system. Where databases are more complex they are often developed using formal design and modeling techniques.. The database management system (DBMS) is the software that interacts with end users, applications, and the database itself to capture and analyze the data.

Database - Wikipedia

Oracle Database Architecture. An Oracle database is a collection of data treated as a unit. The purpose of a database is to store and retrieve related information. A database server is the key to solving the problems of information management.

A NoSQL (originally referring to "non SQL" or "non relational") database provides a mechanism for storage and retrieval of data that is modeled in means other than the tabular relations used in relational databases. Such databases have existed since the late 1960s, but did not obtain the "NoSQL" moniker until a surge of popularity in the early 21st century, triggered by the needs of Web 2.0 ...

NoSQL - Wikipedia

Relational Database Management System (RDBMS) The relational model is the basis for a relational database management system (RDBMS). Essentially, an RDBMS moves data into a database, stores the data, and retrieves it so that it can be manipulated by applications.

Introduction to Oracle Database

Purpose of Database Management Systems. Organizations use large amounts of data. A database management system (DBMS) is a software tool that makes it possible to organize data in a database.. The ...
