1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

A Corner Dipole Loudspeaker The famous Klipschorn solved two problems: how to make a bass horn and what to do with room corners. Placing the Klipschorn in the corner extended the folded bass horn's flaring into the room, allowing deeper bass reproduction; in addition, the Klipschorn makes use of what is otherwise often dead space.
