DNA replication takes place in 5'®3' direction. This means that bases will be added from left to right direction. The template strand will guide this process by telling the new strand which base comes next, this will go on until the new strand is complete and the DNA will once again be double-stranded.

Molecular cloning is a set of experimental methods in molecular biology that are used to assemble recombinant DNA molecules and to direct their replication within host organisms. The use of the word cloning refers to the fact that the method involves the replication of one molecule to produce a population of cells with identical DNA molecules. Molecular cloning generally uses DNA sequences ...

The National College Entrance Examination was created in 1952. The unified national tertiary entrance examination in 1952 marked the start of reform of National Matriculation Tests Policies (NMTP) in the newly established PRC. With the implementation of the first Five Year Plan in 1953, the NMTP was further enhanced. After repeated discussions and experiments, the NMTP was eventually set as a ...
