A typical soil is about 50% solids (45% mineral and 5% organic matter), and 50% voids (or pores) of which half is occupied by water and half by gas. The percent soil mineral and organic content can be treated as a constant (in the short term), while the percent soil water and gas content is considered highly variable whereby a rise in one is simultaneously balanced by a reduction in the other.

Soil - Wikipedia

Hey, thanks for the advice Ty. You see, after writing 300 or so pages of original material, every now and then I like to steal a few bits from someone famous like George Carlin just to see if I can sneak it in under the radar despite the fact that it would be impossible to get away with since millions of people have seen his performance.. What I didn't count on was that an astute reader such ...
