Animal Life. Many species of animal life can be found in the rain forest. Common characteristics found among mammals and birds (and reptiles and amphibians, too) include adaptations to a life in the trees, such as the prehensile tails of New World monkeys. Other characteristics are bright colors and sharp patterns, loud vocalizations, and diets heavy on fruits.

Habitat Animal Printouts. The Earth has many different environments, varying in temperature, moisture, light, and many other factors. Each of these habitats has distinct life forms living in it, forming complex communities of interdependent organisms. A complex community of plants and animals in a region and a climate is called a biome.

**Sampling bias overestimates climate change impacts on ...**

Drunken trees, tilted trees, or a drunken forest, is a stand of trees displaced from their normal vertical alignment.. This most commonly occurs in northern subarctic taiga forests of black spruce (*Picea mariana*) under which discontinuous permafrost or ice wedges have melted, causing trees to tilt at various angles.
