According to the collision theory, there are two ways to increase reaction rate: increase the frequency of collisions, and increase the fraction of collisions that are effective. If you speed up the particles by increasing temperature, there is a greater likelihood that they will bump into one another, and the reaction rate goes up.

Collision Theory - Chemistry | Socratic

Collision theory provides a simple but effective explanation for the effect of many experimental parameters on reaction rates. The Arrhenius equation describes the relation between a reaction's rate constant and its activation energy, temperature, and dependence on collision orientation. Key Equations
