Rational Zeros Theorem Calculator. Also, be careful when you write fractions: $1/x^2 \ln(x)$ is $1 \times 2 \ln(x)$, and $1/(x^2 \ln(x))$ is $1 \times 2 \ln(x)$. If you skip parentheses or a multiplication sign, type at least a whitespace, i.e. write $\sin x$ (or even better $\sin(x)$) instead of $\sin x$. Sometimes I see expressions like $\tan^2 x \sec^3 x$: this will be...

Answers. Already answered this, but here it is again: $f(x) = 3x^5 - 2x^4 - 15x^3 + 10x^2 + 12x - 8$
(a) The Rational Zero Theorem just means that you take the factors of the constant term (the last term which is called p) and place it over the factors of the leading term (the first coefficient which is called q).

The Rational Zero Theorem The Rational Zero Theorem gives a list of possible rational zeros of a polynomial function. Equivalently, the theorem gives all possible rational roots of a polynomial equation. Not every number in the list will be a zero of the function, but every rational zero of the polynomial function will appear somewhere in the list.

The Rational Zeros Theorem states: If $P(x)$ is a polynomial with integer coefficients and if p/q is a zero of $P(x)$ ($P(p/q) = 0$), then p is a factor of the constant term of $P(x)$ and q is a factor of the leading coefficient of $P(x)$. We can use the Rational Zeros Theorem to find all the rational zeros of a polynomial.
