An equation can have zero solutions, one solution, two solutions, or many solutions. A solution is any number that, when replaced into the equation, will give an equality.

What does no solution in algebra mean - answers.com

Many students assume that all equations have solutions. This article will use three examples to show that assumption is incorrect. Given the equation $5x - 2 + 3x = 3(x+4)-1$ to solve, we will collect our like terms on the left hand side of the equal sign and distribute the 3 on the right hand side of the equal sign. $5x \dots$

No Solutions. The next case is what is called no solutions. In this case, we have no answer. Our problem equation is a dud. In terms of helping us find our treasure, it actually leads us down the wrong path, to a dead end, so to speak. We think we are going somewhere, but in the end, this equation just laughs at us with an end that doesn't make sense.

Solving Equations with Infinite Solutions or No Solutions ...

This equation has no solution if we insist that x must be a complex number. However, it does have a solution if we allow x to belong to the cardinals. In the cardinals, this equation has infinitely many solutions of the form \aleph_{ω} , where ω is any ordinal number.

Video transcript. So a linear equation with no solutions is going to be one where I don't care how you manipulate it, the thing on the left can never be equal to the thing on the right. And so let's see what options they give us. One, they want us to-- we can pick the coefficient on the x term and then we can pick the constant.
