Compressible flow. Gases, mostly, display such behaviour. While all flows are compressible, flows are usually treated as being incompressible when the Mach number (the ratio of the speed of the flow to the speed of sound) is less than 0.3 (since the density change due to velocity is about 5% in that case).

The behavior of control volume (CV) for incompressible and compressible flow is depicted in the image below. It can be seen that the CV remains constant for a flow that is incompressible and CV is squeezed for compressible flow. Bernoulli's equation is applicable only when flow is assumed to

be incompressible.
