This graph provides us with another way of defining absolute zero on the temperature scale. Absolute zero is the temperature at which the volume of a gas becomes zero when the a plot of the volume versus temperature for a gas are extrapolated. As expected, the value of absolute zero obtained by extrapolating the data is essentially the same as the value obtained from the graph of pressure ...

Here's what's going on here. First, make sure that you have a clear understanding of what directly proportional actually means. In order for two quantities to be directly proportional, you need one to increase as the other increases or decrease as the other decreases, in both cases at the same rate. Starting from the ideal gas law equation, isolate P on one side of the equation first  $PV = nRT$  ...
