Sturm–Liouville theory is a theory of a special type of second order linear ordinary differential equation. Their solutions are based on eigenvalues and corresponding eigenfunctions of linear operators defined via second-order homogeneous linear equations. The problems are identified as Sturm–Liouville Problems (SLP) and are named after J.C.F. Sturm and J. Liouville, who studied them in the ...

Elementary Differential Equations and Boundary Value Problems 11e, like its predecessors, is written from the viewpoint of the applied mathematician, whose interest in differential equations may sometimes be quite theoretical, sometimes intensely practical, and often somewhere in between. The authors have sought to combine a sound and accurate (but not abstract) exposition of the elementary ...

A partial differential equation (PDE) is a differential equation that contains unknown multivariable functions and their partial derivatives. (This is in contrast to ordinary differential equations, which deal with functions of a single variable and their derivatives.) PDEs are used to formulate problems involving functions of several variables, and are either solved in closed form, or used to ...

is also sometimes called "homogeneous." In general, an  $n$ -th-order ODE has linearly independent solutions. Furthermore, any linear combination of linearly independent functions solutions is also a solution.. Simple theories exist for first-order (integrating factor) and second-order (Sturm–Liouville theory) ordinary differential equations, and arbitrary ODEs with linear constant coefficients can ...

where  $y$ , i.e., if all the terms are proportional to a derivative of (or itself) and there is no term that contains a function of  $y$  alone.. However, there is also another entirely different meaning for a first-order ordinary differential equation. Such an equation is said to be homogeneous if it can be written in the form
