Disk scheduling is done by operating systems to schedule I/O requests arriving for the disk. Disk scheduling is also known as I/O scheduling. Disk scheduling is important because: Multiple I/O requests may arrive by different processes and only one I/O request can be served at a time by the disk controller.

where x is the vector of decision variables, x_j indicates the j th value in this vector, and x_{jl} and x_{ju} are lower and upper bounds on the decision variables, respectively; f is the objective function and g_i is the i th constraint function of vector x . These functions can be highly non-linear and complex, and their collective evaluation for any given x requires the running of environmental ...
