A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi.. Network computer devices that originate, route and terminate the data are called ...

Artificial neural networks (ANN) or connectionist systems are computing systems vaguely inspired by the biological neural networks and astrocytes that constitute animal brains. The neural network itself is not an algorithm, but rather a framework for many different machine learning algorithms to work together and process complex data inputs. Such systems "learn" to perform tasks by considering ...

There was a nice answer from Don Payette in news://comp.protocols.time.ntp, slightly adapted:. The NTP timestamp is a 64 bit binary value with an implied fraction point between the two 32 bit halves. If you take all the bits as a 64 bit unsigned integer, stick it in a floating point variable with at least 64 bits of mantissa (usually double) and do a floating point divide by 2^{32} , you'll get ...
