The index of moderated mediation, used for inference about whether the indirect effect of X on Y through M is moderated by W, is $a_1 b_3$, with a bootstrap confidence interval used for inference (see Hayes, 2015). With evidence of moderation of the indirect effect, this moderation can be probed by estimating the conditional indirect effect of X at various values of W using the function $a_1 (b_1 + b_3 W)$...

In statistics, confirmatory factor analysis (CFA) is a special form of factor analysis, most commonly used in social research. It is used to test whether measures of a construct are consistent with a researcher's understanding of the nature of that construct (or factor). As such, the objective of confirmatory factor analysis is to test whether the data fit a hypothesized measurement model.
