Because the negative particles carry a name that sounds like "electricity," some beginners unfortunately start thinking that the electrons ARE the electricity, and they wrongly start imagining that the protons (having a much less electrical name?) are not electrical. A few text and reference books even outright state this, saying that electricity is composed of electrons.

Coulomb's Law Like charges repel, unlike charges attract. The electric force acting on a point charge q_1 as a result of the presence of a second point charge q_2 is given by Coulomb's Law: where ϵ_0 = permittivity of space. Note that this satisfies Newton's third law because it implies that exactly the same magnitude of force acts on q_2 . Coulomb's law is a vector equation and includes the ...

One algorithm for finding the shortest path from a starting node to a target node in a weighted graph is Dijkstra's algorithm. The algorithm creates a tree of shortest paths from the starting vertex, the source, to all other points in the graph. Dijkstra's algorithm, published in 1959 and named after its creator Dutch computer scientist Edsger Dijkstra, can be applied on a weighted graph.
