A piston ring is a split ring that fits into a groove on the outer diameter of a piston in a reciprocating engine such as an internal combustion engine or steam engine.. The main functions of piston rings in reciprocating engines are: Sealing the combustion chamber so that there is minimal loss of gases to the crank case.

FMEA Failure Mode and Effects Analysis. Description: The Failure Mode and Effects Analysis, FMEA, is a subjective screening tool that uses numerical assignments to determine the risk associated with each input. The highest scored items add the highest risk to the problem. Objective: Assign a level of risk for each input as in impacts the output by determining the severity, frequency of ...

For example, a belt with teeth, called the timing belt, is used in some internal combustion engines to synchronize the movement of the camshaft with that of the crankshaft, so that the valves open and close at the top of each cylinder at exactly the right time relative to the movement of each piston. A chain, called a timing chain, is used on some automobiles for this purpose, while in others ...
