Elementary differential geometry is centered around problems of curves and surfaces in three dimensional euclidean space. We're using Barret Oneil's excellent text this semester. Oneil uses linear algebra and differential forms throughout his text. I am excited about learning the method of moving frames for surfaces in 3-space.

Elementary Differential Geometry: Curves and Surfaces Edition 2008 ... The most elementary objects in plane, resp. space, are its points. A connection between points in  $E^2$  and vectors in  $R^2$  is established as follows: Choose a distinguished point  $O$  as origin of the coordinate system.

Publisher Summary. This chapter focuses on the geometry of curves in  $R^3$  because the basic method used to investigate curves has proved effective throughout the study of differential geometry. A curve in  $R^3$  is studied by assigning at each point a certain frame—that is, set of three orthogonal unit vectors. The rate of change of these vectors along the curve is then expressed in terms of the ...
