Dimensional Analysis and Scaling 1.1 Mathematical models A mathematical model describes the behavior of a real-life system in terms of mathematical equations. These equations represent the relations between the relevant properties of the system under consideration. In these models we meet with variables and parameters.In

Dimensional Analysis and Scaling

In engineering and science, dimensional analysis is the analysis of the relationships between different physical quantities by identifying their base quantities (such as length, mass, time, and electric charge) and units of measure (such as miles vs. kilometers, or pounds vs. kilograms) and tracking these dimensions as calculations or comparisons are performed.
