Color Addition and Subtraction

Objects don't have a color, they give off light that appears to be a color. Spectral power distributions exist in the physical world, but color exists only in the mind of the beholder. Color is determined first by frequency and then by how those frequencies are combined or mixed when they reach they eye. This is the physics part of the topic.

Color - The Physics Hypertextbook

Animation illustrates color addition and subtraction. In the addition choice you could imagine the primary colors red, green and blue to be projected on to a white screen. The rest of the screen is unilluminated and hence black; The region where they overlap gets a different color which depends on which two colors overlap and their brightness ...
