Genetic engineering, also called genetic modification or genetic manipulation, is the direct manipulation of an organism's genes using biotechnology. It is a set of technologies used to change the genetic makeup of cells, including the transfer of genes within and across species boundaries to produce improved or novel organisms. New DNA is obtained by either isolating and copying the genetic ...

Mini-Conference Themes. Each mini-conference will consist of 3 to 6 panels, which will be featured as a separate stream in the program. Each panel will have a discussant, meaning that selected participants must submit a completed paper in advance, by 1 May 2018. Submissions for panels will be open to all scholars on the basis of an extended abstract.

2018 - Kyoto - SASE

This course is about applying economic models with data to deal with corporate decisions and strategies. The art and science of economic modeling for this purpose makes use of the principles and the tools derived from the studies of information economics, games, industrial organization and the related fields.
