In mathematics, differential calculus is a subfield of calculus concerned with the study of the rates at which quantities change. It is one of the two traditional divisions of calculus, the other being integral calculus, the study of the area beneath a curve.. The primary objects of study in differential calculus are the derivative of a function, related notions such as the differential, and ...

### **Differential calculus - Wikipedia**

Given a function, differential calculus roughly lets you understand how fast the dependent variable changes as the/a independent variable changes. An example would be finding the instantaneous velocity of a car given a graph of that cars motion vs time. Integral calculus is the calculus of accumulation.

Applications of differential calculus include computations involving velocity and acceleration, the slope of a curve, and optimization. Applications of integral calculus include computations involving area, volume, arc length, center of mass, work, and pressure. More advanced applications include power series and Fourier series.

### **Calculus - Wikipedia**

The word Calculus comes from Latin meaning "small stone", Because it is like understanding something by looking at small pieces. Differential Calculus cuts something into small pieces to find how it changes.. Integral Calculus joins (integrates) the small pieces together to find how much there is.

integral calculus was first developed by Archimedes of Syracuse OVER 2250 YEARS AGO! He was a very interesting guy. You can google him to learn more, but I highly recommend the (historical fiction) book "The Sand Reckoner" by Gillian Bradshaw which is a story of his life.

### **Differential and Integral Calculus Review and Tutorial**

The introduction of variable magnitudes into mathematics by R. Descartes was the principal factor in the creation of differential calculus. Differential and integral calculus were created, in general terms, by I. Newton and G. Leibniz towards the end of the 17th century, but their justification by the concept of limit was only developed in the ...
