Theoretical physics is a branch of physics that employs mathematical models and abstractions of physical objects and systems to rationalize, explain and predict natural phenomena. This is in contrast to experimental physics, which uses experimental tools to probe these phenomena. The advancement of science generally depends on the interplay between experimental studies and theory.

Aristotelian physics is a form of natural science described in the works of the Greek philosopher Aristotle (384-322 BCE). In his work Physics, Aristotle intended to establish general principles of change that govern all natural bodies, both living and inanimate, celestial and terrestrial - including all motion (change with respect to place), quantitative change (change with respect to size ...

Consciousness and the New Physics. Space-Time According to Einstein. The special theory of relativity, formulated by Albert Einstein in 1905, is based on the experimentally confirmed idea that the velocity of light is the same universal constant,  $c = 3 \times 10^{10}$  cm./sec., for all observers who move uniformly in straight lines relative to each other.
