Elements as Building Blocks The periodic table is organized like a big grid. Each element is placed in a specific location because of its atomic structure. As with any grid, the periodic table has rows (left to right) and columns (up and down). Each row and column has specific characteristics.

Valence is a measure of how many chemical bonds can be formed by an element. The IUPAC defines valence to be the maximum number of univalent atoms (such as hydrogen or chlorine atoms) that may combine with an atom of the element.
